Nominee

One card =  
one object  
in JSON array.  
Populate cards  
with each  
object's data.

Sort cards into stacks of 3.

Make card stacks responsive using Bootstrap, so on desktop size there are 2 card stacks per row. On mobile there is one card stack per row.

On "layered" card click, re-sort to put clicked card on top of card pile. If top card clicked, enlarge card as a modal.
